Environmental Policy

Themes Incorporated Limited is committed to minimising the impact of its activities on the environment.

The key points of this strategy are:-

1. Minimise waste by evaluating operations and ensure they are as efficient as possible, this may include combining deliveries and collection to a single vehicle to reduce air pollution, and wasted traveling time.
2. Minimise toxic emissions through the selection and use of its fleet to assign smaller vehicles where possible.
3. Actively promote recycling both internally and amongst its customers and suppliers, this will include the use of blankets for equipment protection and flightcases which are all re-used when the goods are being returned.
4. Source and promote a product range to minimise the environmental impact of both production and distribution, for example we use LED light fittings instead of tungsten fittings, this reduces replacement lamps and reduces power consumption.
5. The nature of our business as a hire company complies with many environmental issues and is the correct use of a product for recycling, as many of the products are used time and time again without replacement. This strategy helps the company meet its environmental commitment.
6. We will actively promote environmental issues to our staff and raise awareness of environmental issues.
7. This is an ongoing document and additional information can be added as matters arise.
